

ENGINEERING APPRENTICESHIP PROGRAMME

Have you considered recruiting apprentices this year?

According to a recent survey (Belfast Telegraph 26 February 2010), there are signs that the current economic downturn is coming to an end. A significant result of previous recessions was a serious shortage of skilled workers. Employers should now be planning for the end of the current situation and indeed for the replacement of retirees through recruiting apprentices

Engineering Training Services (ETS) are able to offer a 1 STOP SHOP approach to recruiting and training apprentices.

ETS can greatly reduce your recruitment costs (currently up to £5000 per head) by promoting, advertising, shortlisting and testing applicants on your behalf leaving you with a group of focussed candidates who have shown an interest in your company. You should be aware that there are no age restrictions for apprentices and indeed you may consider existing staff for the programme. You will be responsible for interviews and offers of employment.

Apprenticeship programme

ETS will assist you with the delivery and successful attainment of all the apprenticeship outcomes, ie NVQ levels 2 and 3. A Technical Certificate which could be either City and Guilds or BTEC, Essential Skills (if required) and any other apprenticeship issues which may arise during the programme

Costs

All relevant training and assessment costs will be met by ETS and the participating employer will benefit financially when the programme outcomes are met.

If you wish to avail of this uniquely successful programme and prepare your company for coming out of the recession, you should contact us via the following:
